GOKULAKANNAN

Chennai India 600063 | 9361443302 | gokulkannangk28@gmail.com

SUMMARY

Aspiring Full-Stack Developer with strong fundamentals in programming, web technologies, and system design. Skilled in building structured and scalable applications using clean code and proper architecture. Effectively leverage AI tools while relying on core logic and problem-solving to develop real-world solutions.

SKILLS

- HTML5
- CSS3
- Java (Basics)
- MS Office
- AI Tools (GEMINI, ANTIGRAVITY, OPENCLAW, LLM MODELS)
- System Hardware
- Operating Systems (Windows, Linux)

EDUCATION

B.Tech in Information Technology (CGPA: 8.01)

Sri Ramanujar Engineering College, Chennai (2022 – 2026)

Higher Secondary Education

Kurinji Matricula on Higher Secondary School | Harur, India | May 2022. (Final Grade: 72%.)

PROJECT

1.Amurta Hospital

Built an AI-powered healthcare system for real-time medical consultation. Used React, TypeScript, and Google GenAI API for intelligent responses. Implemented serverless backend using Cloudflare Workers. Improved consultation efficiency and reduced response time significantly.

2. Women Safety System – SOS Web Application

Developed a real-time emergency alert system with one-click SOS feature. Integrated GPS tracking and multi-channel alerts using WebSockets and APIs. Built scalable backend using Node.js and Express.js. Enhanced user safety with instant location sharing and notifications.

3. HandSpeak – Sign Language Interpreter

Created a real-time sign language recognition system using OpenCV and MediaPipe. Applied ML models for gesture and emotion detection. Implemented English–Tamil translation with voice output. Improved accessibility for hearing-impaired users.

4. CRM System – Business Management Platform

Built a full-stack CRM system for managing customers, orders, and invoices. Designed RESTful APIs and implemented JWT authentication. Developed analytics dashboard for business insights. Reduced manual work through automation and data management.

5. VIP System – Secure Access Management

Built a system to manage VIP user access with authentication and role control. Implemented secure login, authorization, and data protection mechanisms. Designed scalable backend for handling multiple user roles. Improved system security and controlled access to sensitive data.

CERTIFICATIONS

- Java – Besant Technologies
- Spring Boot – Udemy (Ongoing)
- Data Analysis – QSpiders (Ongoing)

HOBBIES

I love exploring new websites, discovering interesting technologies, and keeping up with the latest trends and news.
